Professional Summary

Software Engineer with hands-on experience building scalable full-stack and desktop applications using modern frontend frameworks and modular backend architectures. Skilled in RESTful API design, authentication systems, relational and NoSQL databases, and component-driven UI development. Passionate about developing secure, maintainable, and production-ready systems with clean architecture and optimized performance.

Education

2022 – Present	**BSc in Computer Science and Engineering** Major: Data Science CGPA: 3.93/4.00	**University of Liberal Arts Bangladesh**
2019	**Higher Secondary Certificate** Group: Science GPA: 5.00/5.00	**Ideal School & College**
2017	**Secondary School Certificate** Group: Science GPA: 5.00/5.00	**A.K. High School & College**

Skills Summary

Programming Languages: JavaScript, Python, C, C++
Frontend Development: React, Vite, Tailwind CSS, NextUI, GSAP
Backend Development: Node.js, Express.js, RESTful API design, JWT authentication, bcrypt
Databases: MongoDB (Mongoose), MySQL, PostgreSQL
Architecture & System Design: Modular services, Role-based access control (RBAC), State management, Component-driven architecture, Data validation
Testing & Dev Tools: Jest, Supertest, mongodb-memory-server, Git, Nodemon, dotenv
Desktop Application Development: PyQt5, Java Swing

Experience

Machine Learning Intern *February 2026 – March 2026*
Elvvo Pathways (Remote, Cairo, Egypt)

- Developed and deployed ML models using Random Forest, XGBoost, Logistic Regression, collaborative filtering (Funk SVD), and CNN-based deep learning architectures.
- Applied feature engineering, SMOTE, time-series analysis, transfer learning, and cross-validation to enhance model performance and generalization.
- Evaluated models using RMSE, accuracy, precision, recall, and F1-score; performed systematic hyperparameter tuning for optimal pipeline reproducibility.

Teaching Assistant *May 2025 – Present*
Dept. of Computer Science & Engineering, University of Liberal Arts Bangladesh (ULAB)

- Assisted faculty in lab/course sessions; supported students with course materials, assignments, and lab tasks.
- Managed course logistics, scheduled consultation sessions, and maintained grade records.

Research and Publication

1. Unlearning for Clinical Deployment: Scalable Data Erasure in Medical Image Classification Models
Author(s): Urbana Jaman Orthee, Abu Saleh Muhammad Naeem, Tamanna Khatun, Meharun Ohona, Dr. Nafees Mansoor
Venue: *IEEE Conf. on Biomedical Engineering, Computer and Information Technology for Health, 2025*

2. Efficient Data Erasure in Deep Learning via Sparsity and Stability Mechanisms
Author(s): Urbana Jaman Orthee, Abu Saleh Muhammad Naeem, Tamanna Khatun, Meharun Ohona, Dr. Nafees Mansoor
Venue: *28th International Conference on Computer and Information Technology, 2025*

Research Interests: Machine Learning, Natural Language Processing, Ethical AI and Machine Unlearning, LLM Evaluation and Model Optimization

Projects

Trade Hub – Full-Stack Marketplace Platform
Tech Stack: Node.js, Express, MongoDB, React 18, Tailwind CSS, JWT

- Architected a full-stack marketplace platform with modular Express services and RESTful APIs supporting authentication, listings, messaging, disputes, and admin controls.
- Implemented JWT-based authentication, password hashing (bcrypt), input validation, and secure email workflows to ensure system reliability.
- Designed reusable React components with structured routing and optimized state management for scalable frontend development.
- Integrated unit and integration testing using Jest and Supertest to validate API stability and business logic.

VCMS – Veterinary Clinic Management System (Desktop ERP)
Tech Stack: Python, PyQt5, MySQL

- Engineered a modular desktop ERP system managing appointments, billing, inventory, employees, and financial reporting.
- Designed relational database schemas with role-based authentication and structured service layers for data integrity.
- Optimized SQL queries and reporting workflows to improve performance across interconnected modules.
- Implemented scalable GUI components with clear state handling and event-driven architecture.

Polar Threads – Modular React E-Commerce Frontend
Tech Stack: React, Vite, Tailwind CSS, React Context

- Developed a component-driven e-commerce frontend with reusable UI modules and structured routing.
- Implemented centralized cart state management using React Context for predictable application behavior.
- Designed responsive layouts with Tailwind CSS and optimized rendering performance for scalability.
- Integrated modern UI libraries and animation tools to enhance interactivity while maintaining clean architecture.

PharmaCare CLI – Pharmacy Management System
Tech Stack: C, GCC

- Built a modular command-line pharmacy management system handling inventory, suppliers, orders, and reporting.
- Structured reusable functions and console-based routing to maintain clear state transitions across modules.
- Implemented secure admin login and optimized lightweight performance for efficient data handling.
- Demonstrated foundational software engineering principles in modular programming and system organization.
